Celebrating Twenty Five Years of Plastic Surgery!

The Georgia Institute For Plastic Surgery started in 1998 with the following mission::

“To be the practice of choice providing the highest quality of care at the most reasonable cost with services that go beyond expectations of those we serve.”

We grew from a practice of three to our present Practice of six very busy plastic surgeons. Today we have 8 offices, 65 employees and a fully licensed Ambulatory Surgical center with 3 operating rooms.

Our practice helped to develop the Breast Cancer Centers at Candler and Memorial Hospitals. We were the only private practice in a group of 16 sites performing *The Post Mastectomy Reconstruction Outcome Study* (MROC) by the National Institute for Health. We are involved in research on new surgical devices and procedures and have been recognized as “The Best of Savannah” since it started in 2012.

Our surgeons have held prominent positions in many of the National Plastic Surgical Societies, publish new concepts in our fields, and present and teach at our national conferences.

Whether it is for the treatment of a skin lesion, a hand problem, disease of the breast, reconstruction after cancer, or the desire to learn how to improve your appearance through surgical and non-surgical procedures – our doctors strive to help you achieve your goals.

The next 25 years are going to be even more exciting. We are interviewing to hire new plastic surgeons, planning on expanding our office locations, and providing our great care to an expanded area and for our growing population in the Low Country.

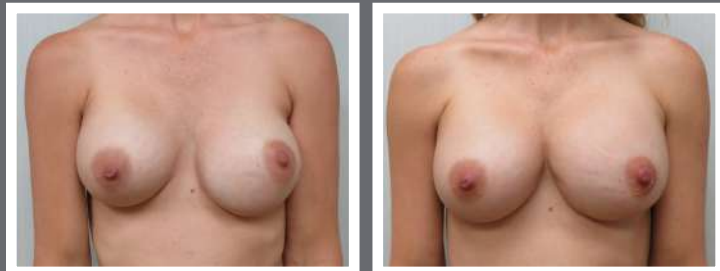

Our Motto is and remains
– Feel Better about Yourself!

Correction of Difficult Breast Augmentation Complications

The majority of women who undergo breast augmentation obtain excellent results with appropriate consultation and the care of a skilled Plastic Surgeon. No matter how good the surgeon is, there are times that the patient does not heal as expected, the patient might develop recurrent "hardening of the breast" (Capsular Contractures), or the implant stretches out the lateral wall or "Bottoms Out" leading to results that are not acceptable.

With advanced techniques and knowledge, we can often help rescue these cases and lead to happy patients. Occasionally we use new products like Strattice to help harness the implant and avoid recurrent capsular contractures. If you or someone you know has these problems, call 912 355 8000 and schedule a consultation to discuss your options.

Liposuction of the Back and Flanks

Women strive to be in excellent shape. You will see many of them walking along the beach in bathing suits that accentuate their curves as they walk away from you.

Have you had a picture taken of yourself from behind?

If it does not meet your expectations, there are ways we can improve your posterior appearance through liposuction or a combination of liposuction and skin removal.

Call us today for a consultation, at 912-355-8000.

Natural Results in Facelifts

Many of the patients who come to our office seeking surgery for facial rejuvenation do not want to look different and are afraid of the “Wind Blown” look. They don’t want others to know what they have done – they want to look like themselves – Just Younger and NATURAL!

In the hands of a skilled Plastic Surgeon, you can lose years and still look like you. A combination of elevation of the underlying structures (The SMAS), release of fibrous attachments, and fat grafting where needed can lead to spectacular results with a quick recovery.

Brachioplasty – Removal of Excess Skin of your Upper Arms

Before

After

Does the under aspect of your upper arm wiggle or sway?
Some call it “Bat Wings” and even individuals that are not
overweight can have excess loose skin to their upper arms.

The procedure to correct this is called a Brachioplasty.
The downside is a scar along the inferior margin of your
arm, although all our patients wear short sleeve shirts
without concerns.
